

13-Jul — changes shipped today (one-liners)

Engine + estimate correctness

- LOS × ward-charge multiplication fixed (manual days now price correctly; LOS-only override works)
- TR1 cash-rate fallback for insurer tariffs with missing service rates (₹1 token rates kept as-is; fallback rows flagged)
- "Cash rate" badges + "{n} items priced at cash tariff" note in the estimate workbench
- Per-room package pricing from the stored room tiers (General/Twin/Single now differ — verified live)
- Robotic-by-payor one-click suggestion ("GIPSA prices this as TKR + robotic add-on — switch?") — live
- OT hours input in BOTH forms, with the cohort default shown ("typically N")
- Room-charge / LOS auto-population verified end-to-end on the test server

NLP / treatment matching

- AI treatment matcher (free wording → correct family, ranked with confidence) on the admission-note path
- AI match also fires when the dropdown search finds nothing — e.g. "dnc dilatation" → D&C / Surgical Evacuation, one click

Patient-facing estimate (preview/PDF)

- KIMS Gachibowli logo on the estimate header
- Terms & Disclaimers block taken from the printed FC forms (LOS/complications, pre-auth, 80% advance, refunds, Sec 269ST) — included in translations
- TPA field beside the Insurer in both forms (free-text for now; shows on the estimate)
- Zero values hidden (no "0 ICU", no ₹0 rows)
- Typical-stay hint + placeholders in the Simple form

Package inclusions / exclusions

- Patient-friendly rewrite format finalised from the approved sample
- Bulk AI rewrite executed across the full package catalog (clean text now shown on the estimate)

- When a package has 2 source variants: pick Source 1/2 on the estimate page → preview shows that variant's clean version (verified on ORT5535)

Workbook (Excel export)

- "Robotic Data" provenance block — "robotic charge seen in 26 of 26 Cash cases (100%) · applied · value", on both generation paths

Data / audits

- KIMS Packages Excel vs database — full 642-row comparison + PDF report (24% full match; per-room tiers existed in the DB but were unused — now used; 9 questions listed in the report)
- [~] Package-bill actuals (3 record Excels): files analysed, streaming loader built & memory-verified, data staged — **paused, restart-ready**
- Estimate range from actual package-bill amounts (excl. F&B) — resumes with the actuals load
- Packages-Excel override ETL — starts once the report's 9 questions are answered

Infra / process

- Dedicated test server: <https://fc-estimate.hospitalos.figitallabs.com>

Everything above is live on the test server for accuracy verification.
