-----	---	-----------	----------------------------	-----------	--------	------------	----------------	--------

△ pass* = settlement math correct but "with package" total exceeds "without package" — the insurance packages' inclusion text is in a format the coverage parser cannot read yet (see BUG-2), so no line item is netted off against the package price. Insurance covers / Patient pays refer to the itemized (no-package) route; "Pkg-route ins/pat" is the same policy settled against the package price + extras. All amounts from POST /api/estimate/build on the dev dataset. Conservation invariant (insurer + patient = gross + upgrade-excess) held on every case that produced a settlement.
